Product image

Original product title: 手动测角仪

Product overview

The goniometer is a precision angular measuring instrument for research institutions, factories, aerospace and metrology. It normally combines an autocollimator, a high-precision rotary table and a control system. Electronic goniometers provide real-time measurement display for convenient reading and recording. Small angular changes are detected by an angle sensor, processed by the control system and sent to the display terminal.

Applications

Optical manufacturing: prism accuracy inspection and process quality control. Metrology: calibration and verification of angular reference artefacts and angle-measuring equipment. Scientific research: experimental angle measurements.

Technical specifications

Parameter	Source data
Autocollimator objective focal length	300mm
Autocollimator clear aperture	48mm
Autocollimator field of view (X, Y)	1900*1400″

Parameter	Source data
Display resolution	0.01″ (adjustable)
Light-source centre wavelength	625nm
Light source type	Semiconductor LED
Power supply configuration	Choice of integrated power supply or external adjustable light-source power adapter
Rotary-table diameter	205mm
Scale division	0.5°
System error	±0.3″
Repeatability	≤ 0.1″
Unit weight	25kg
Load capacity	15kg

Use and verification notes

Compiled from the saved official source. Resolution is not accuracy. Preserve the stated range, environment and configuration conditions. Selection and acceptance are subject to the technical specification agreed by both parties.
